

IN THE SPECIFICATION:

Page 2, lines 20 to 28, replace the paragraphs with the following amended paragraphs.

In Fig. 1, a container according to the invention is generally designated 1.

As will be seen, the shown container has ~~a vertical side wall 5 and walls~~ 5a, 5b, a bottom wall 4a which are connected with each other by an and inclined walls 4b, 4c which extend from the bottom wall to the side walls 5a, 5b. A pipe 6 is connected ~~at~~ to the bottom 4 at inlet opening 4a, the pipe being intended for discharging, e.g., shrimp admixed with ice/water.

With a view to avoid clogging of the container, the bottom and optionally the inclined walls are formed with holes 3, 7 through which a medium, such as air may be conveyed, indicated, e.g., by the reference numeral 8. The holes are located on opposite sides of inlet opening 4a and are located along the length of the (elongated) container.

Page 3, line 9, replace the paragraph with the following amended paragraph.

Instead of a pipe or hose 6 connected to the bottom wall 4a, the pipe or the hose may be disposed inside the container, as shown by the reference numeral 2.
